About Us

WatchfulEye specializes in developing and manufacturing a complete range of surge protective devices (SPDs), protecting your equipment and systems against surge caused by lightning inductive voltage or operational over voltages.

Watchful Eye surge protective devices are widely used in low voltage DC & AC power supply system, data and control system in telecommunication and new energy industry such as solar and wind power system, etc.

Watchful Eye is dedicated in quality control, researching and innovation. Watchful Eye surge protective devices are in accordance with IEC61643, UL1449 and other international industry standards; Smart Surge Protective Device series combines with the latest technologies including IoT (Internet of Things), remote monitoring, RS485/Modbus connection and cloud service to realize multi-function-in-one protection, improving the efficiency of system security management.

Headquartered in New York, WatchfulEye has a network of sales and technical support team to serve customers worldwide with high quality products and premier professional technical service.
